

Skidmore Community Garden Annual Report 201

Arugula

Arugula did well, especiall

Since there is so much variety in the size of the heads, in the future pricing by the

There were several self seeded volunteers from last year as well.

Nasturtiums

They did best when planted at the ends of beds, rather than mixed in with other flowers. Give them some space to bulk up.

The volunteers were generally interested and

tried to schedule deliveries for special events.

Three Sisters

We planted corn, beans, and squash in the penicillin beds.

Corn

We grew some sweet corn, which made a nice treat for some of the September volunteers. It was pretty and fun but we do not have the space for large quantities.

We also grew some popcorn, which germinated a bit better than the sweet corn.

Pole Beans

We planted several varieties of pole beans to grow up the squash, including rattlesnake beans, which we sourced from my mother. Some rattlesnake bean seed was saved.
